

Phishing Attack Report

Prepared by: yehia mohamed hassan amin

1. Objective

This report documents phishing simulation and social engineering testing performed in a controlled lab environment.

2. Tools Used

- Zphisher
- Social Engineer Toolkit (SET)
- URL Shorteners

3. Methodology

- Creating phishing pages (e.g., Google login clone)
- Generating shortened malicious links
- Capturing victim credentials and IP address

4. Observations

- Victim interaction detected
- IP address successfully captured
- Credentials submitted via phishing page

5. Conclusion

This simulation demonstrates the effectiveness of phishing attacks and highlights the importance of user awareness and security practices.
