

WiFi Crack Report

Prepared by: yehia mohamed hassan amin

1. Objective

This report documents wireless network analysis and testing activities performed in a controlled environment.

2. Environment Setup

Host System: macOS

Virtualization: VMware Fusion

OS: Kali Linux

3. Activities Performed

- Scanning available Wi-Fi networks
- Capturing handshakes and PMKID
- Testing password strength using wordlists

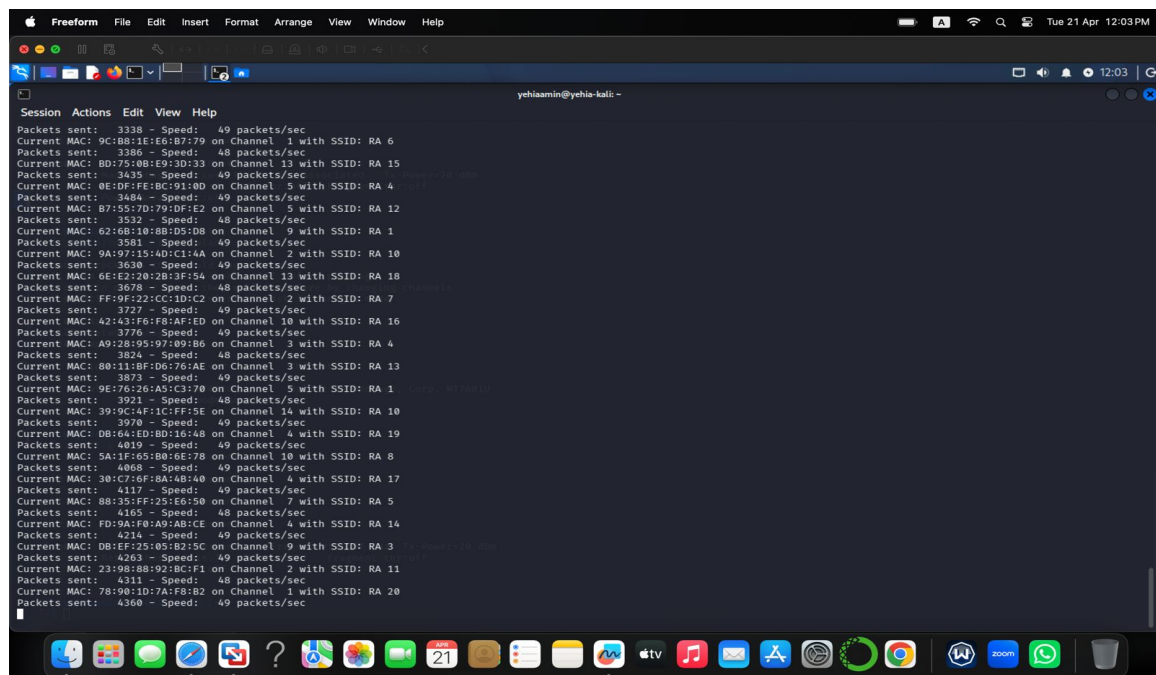

4. Observations

Multiple networks detected with varying encryption (WPA2/WPA3).

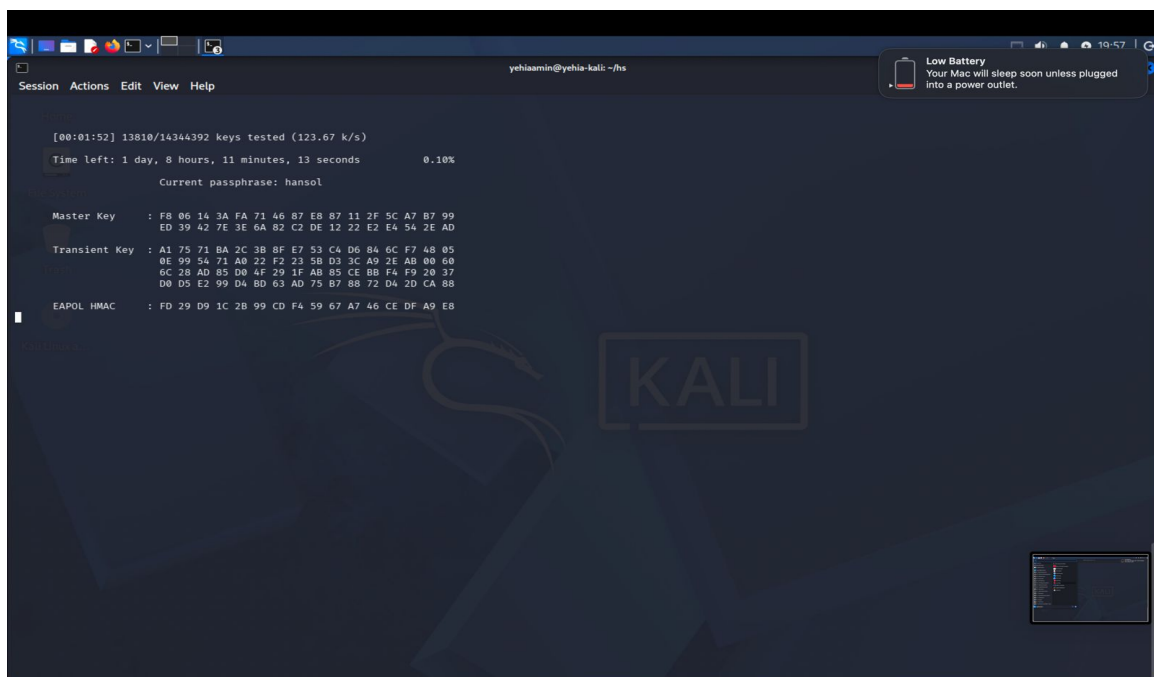

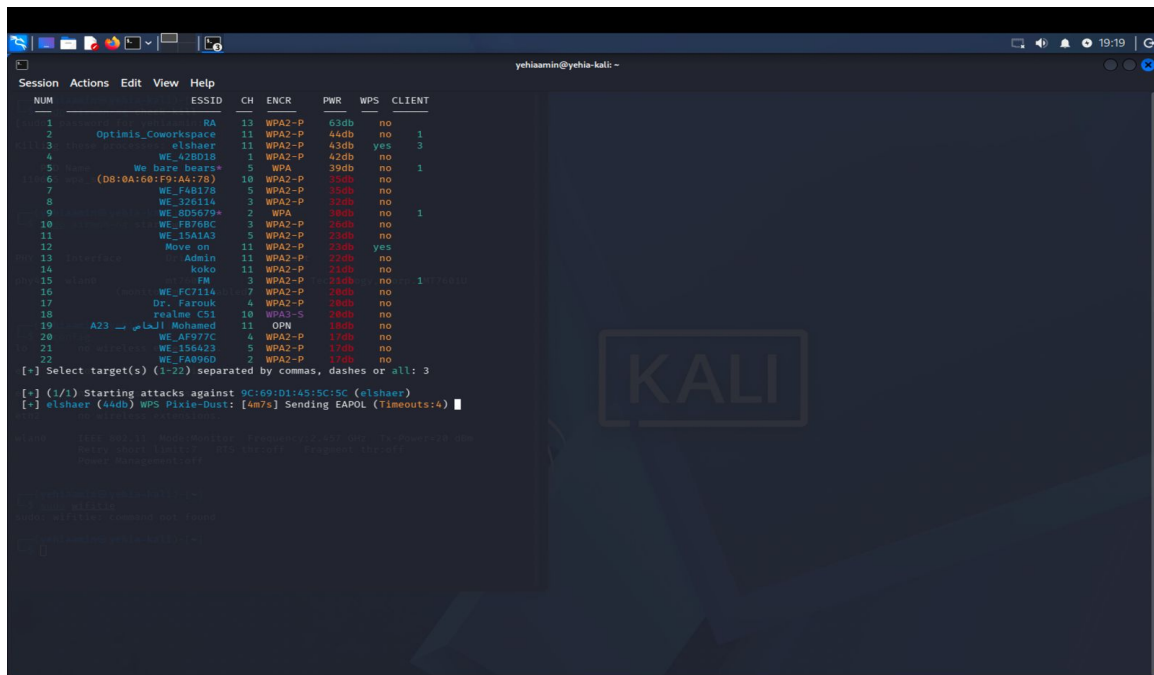

Handshake successfully captured but password not found in dictionary.

5. Conclusion

The testing demonstrates proper setup of wireless auditing tools and highlights the importance of strong passwords.

The screenshot shows a macOS desktop environment. At the top is the menu bar with 'Freeform' as the active application. Below it is a dock containing various application icons. The main area of the screen is occupied by a terminal window titled 'yehiaamin@yehia-kali: -'. The terminal displays the output of a network scanning tool, showing a list of detected wireless networks. Each entry includes the number of packets sent, the speed in packets per second, the current MAC address, and the channel and SSID. The networks listed include RA 6, RA 15, RA 4, RA 12, RA 1, RA 10, RA 18, RA 7, RA 16, RA 4, RA 13, RA 1, RA 10, RA 19, RA 8, RA 17, RA 5, RA 14, RA 3, RA 11, and RA 20. The terminal window has a standard macOS-style title bar with red, yellow, and green window control buttons.

***** Welcome *****
This script is only for educational purposes. Be good boys&girls!
Use it only on your own networks!!

Accepted bash version (5.3.9(1)-release). Minimum required version: 4.2
Root permissions successfully detected
Detecting resolution... Detected!: 688x808

Known compatible distros with this script:
"Arch" "Backbox" "BlackArch" "CachyOS" "CentOS" "Cyborg" "Debian" "Fedora" "Gentoo"
"Gali" "Kali arm" "Manjaro" "Mint" "OpenMandriva" "Parrot" "Parrot arm" "Pentoo"
"Puppy" "Raspberry Pi OS" "Raspbian" "Red Hat" "Suse" "Ubuntu" "Mifisla"

Detecting system...
Kali arm Linux

It has been detected that you are operating in a virtual machine ("Vmware"). This
is not the most recommended setup for working with wireless networks. If your resu
its are not as expected, use native Linux.

Let's check if you have installed what script needs
